

Glow system for diesel engines

From cold-start aid to adaptive glow system

Diesel

Starting comfort

Powertrain systems and electrified mobility

Outstanding expertise in both glow systems and injection systems

maximum starting comfort

Quick, reliable starting, even at low temperatures, smooth, low-noise engine operation

efficient

Post-glowing during the warm-up phase significantly reduces emissions.

- ▶ The efficient Bosch glow system ensures maximum starting comfort of the diesel engine and allows the engine to operate quietly and with low emissions after starting and during the warm-up phase.
- ▶ The glow system consists of glow plugs with ceramic or metal heating elements, a glow control unit and heating software.
- ▶ The electronic glow control unit adapts the heat output of the glow plugs to meet engine requirements.
- ▶ In addition to the system and components, Bosch also offers the relevant software and application from a single source.
